Chrono Driver

Meccaniche Veloci: Chrono Driver

0

19 Jun 2013 Watches by Ed Jones

Paying homage to the historic stars of motorsport, Meccaniche Veloci has created the 'Chrono Driver', a modern interpretation of the "driver's watch". The idea behind this watch's design was to make it easily readable under conditions where "even the slightest distraction can be unforgiving", such as racing.

The case of the Chrono Driver is supported by a titanium or carbon frame, allowing the driver to position the case at two different angles. Because of this adjustability, the driver can make the watch readable at a glance, without losing grip on the wheel. The case itself is available in either untreated or IPB black titanium, ensuring that you do not have sacrifice aesthetics for precision time keeping.
